

The DNC “International Medical Integration” Program for season 2 in 2023

The International Medical Integration Program aims to improve and cultivate specialized English skills for medical students at Nam Can Tho University, as well as other universities across the country that offer medical training. This program also collaborates with the American Medical University.

Vietnamese science is well-known for two main fields: Basic Science and Medicine. The medical sector, in particular, has made significant contributions to the country's overall development and the global field of medicine, contributing positively to the overall development of the country and elevating the prestige and position of the country's medical sector in the international arena.

The Ministry of Health in Vietnam is continuously implementing policies to integrate international medicine

Thanks to the contributions of previous generations, it is important for the next generations to continuously imitate and study hard in order to promote and develop the medical profession of Vietnam. This will help to showcase the excellence and achievements of the Vietnamese people to the world.

The DNC Medical Club at Nam Can Tho University is dedicated to promoting international medical integration for its students. In 2023, the club organized the second season of its "International Medical Integration" program, building upon the success of the first season's "DNC Medical Students Luggage" program in 2022. This program has garnered attention not only from DNC's medical students, but also from students at other universities with medical training throughout the country.

The seminar "USMLE and US Residency" helps students better understand the study methods and become a Resident Doctor in the United States (Photo: DNC Studio)

International Medical Integration is a program that aims to teach and exchange knowledge and medical research methods through a digital platform. It combines Vietnamese lectures with specialized English to enhance and

perfect students' basic English skills, specialized English, and soft skills. The lectures are prepared by excellent professors and doctors from Vietnam and the United States, with the goal of helping students from the Faculty of Medicine at Nam Can Tho University and other medical students across the country integrate into the international medical environment and become global citizens and doctors.

Vietnamese doctors who have recently passed the US Residency Examination shared their experiences at the "USMLE and US Residency" seminar (Photo: DNC Studio)

Our programs include opportunities to share experiences and best practices in scientific research. For example, our seminar "Optimal Practices in Writing Scientific Articles" teaches students how to effectively approach different types of scientific reports and use appropriate information and data to create successful reports that meet specific criteria and scientific requirements. These reports not only contribute to individual or group research, but also serve as valuable resources for future generations to review and learn from in their own scientific research endeavors.

The program serves as a platform for fostering exchanges, connections, and support among medical students from Nam Can Tho University, Hanoi National University, Danang University, Ho Chi Minh City National University, and American Medical University.

DNC Medical students are always ready for international integration (Photo: DNC Studio)

The program series consists of 16 topics and in-depth lectures covering common diseases of 9 organ systems in the human body, including immunology, nephrology, the musculoskeletal system, hematology, endocrinology, neurology, the digestive system, the cardiovascular system, and the respiratory system.

Expected date for "International Medical Integration" Program for season 2 in 2023

No.	Name of Lecture	Date
1	1. Immunology 2. Nephrology 3. Musculoskeletal system	3/2023 - 6/2023
2	1. Hematology 2. Endocrinology 3. Neurology	6/2023 - 9/2023
3	1. Digestive system 2. Cardiovascular system 3. Respiratory system	9/2023 - 12/2023

The program not only offers specialized knowledge, but also serves as a platform for networking and exchanging ideas. Additionally, it provides DNC's medical students with the opportunity to gain practical experience in the field of healthcare and health science research from experts, lecturers, and leading doctors.

The standard framework for lectures was presented at the "International Medical Integration" Program for season 2 in 2023

No.	Time	Contents	Notes
1	45 - 60 minutes	Typical clinical case	Cited from documents (books, magazines,...) or personal experience
2		Lesson Objectives	
3		Main content	Ensure key content such as: 1. Definition 2. Pathogenesis/etiology 3. Clinical symptoms 4. Paraclinical manifestations 5. Diagnosis (core part) 6. Treatment (quick view)
4		Clinical case solution	Ensure that students are guided to apply the knowledge in part 3 to solve problems in part 1.
5		Take home message	Number of homework questions depends on the lecturers. Request for evidence of quality

			question sources
6	15 - 30 minutes	Final questions	
7	15 – 30 minutes	Answering students' questions	
<p>General notes:</p> <ol style="list-style-type: none"> 1. The presentation can be in either English or Vietnamese. If the presentation is in English, Dr. Tai will provide translation support. 2. Please provide a full citation for the above content. 3. It is recommended to use Vietnamese with explanations or specialized English when teaching. 4. All lectures are recorded for instructional purposes only. 5. Lecturers are required to submit their lectures 24 hours in advance for students to review and ask questions through Dr. Tai (email: ttttai@nctu.edu.vn).
