

## NAM CẦN THƠ UNIVERSITY PROVIDES BOTTLED WATER TO STUDENTS AND SUPPORTS THE COMMUNITY

In response to the increasing daily demand for drinking water among students, Nam Cần Thơ University has implemented a program to distribute free bottled water to ensure the health and basic living needs of its students.

DNC Water is produced from clean water sources through a modern filtration and treatment process, meeting food safety and hygiene standards while maintaining natural purity. DNC Water is purified through a multi-layer pressure filtration system, reverse osmosis (R.O) technology from Germany, and sterilized by ozone and ultraviolet (UV) rays.

The objectives are to provide safe, clean, and convenient drinking water to students, ensure the health and enhance the academic productivity of students, and reduce the use of single-use plastic bottled water, thereby contributing to environmental protection.

The free bottled water distribution program has brought many practical benefits to the student community at Nam Cần Thơ University. Feedback from students shows great satisfaction and deep appreciation for this program. The habit of using bottled water among students has significantly decreased, thereby reducing plastic waste. Additionally, Nam Cần Thơ University has donated bottled water to the student community in charity programs supporting exam seasons.

The program not only meets basic needs but also contributes to building a healthy, sustainable learning and living environment for students at Nam Cần Thơ University.
